It recently came to my attention that you are considering restricting the broadcast of local weather and traffic information on satellite radio. While I am not fully versed on all the legal issues I ask that you consider rejecting the National Association of Broadcasting's petition 04-160 as this change will inhibit the healthy competition that satellite broadcasts bring to radio. I have been a long listener of local radio and the ever increasing growth of the commercial time has made listening unbearable. I respect that there are costs associated with running a radio station and that these are business ventures designed to make profits, but I believe that the competition brought by satellite will assist the quality of the local broadcasts while giving me the opportunity and choice to pick my listening. Please reject petition 04-160.  
Thank you.
